

Caviar facial

Caviar facial

Caviar is an excellent treatment for face brightness as it helps eliminating the fine lines, and combating ageing agents. It activates the cells to manufacture collagen, the protein responsible for skin's youth and vividness. The antioxidants in the caviar lift the skin and eliminate the fine lines that appear on the face. It also helps unifying skin color, and moisturizing it by balancing between the loss and absorption of water. Its cosmetic importance lies in its role in brightening the skin and correcting/remediating its blemishes.
